SUMMARY

Results-driven MERN Stack Developer with hands-on experience in MongoDB, Express.js, React.js, and Node.js for building scalable and responsive full-stack web applications. Skilled in RESTful API development, frontend-backend integration, and database design using Mongoose. Proficient in modern JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Flexbox, and CSS Grid for creating user-friendly interfaces.

TECHNICAL SKILLS

Frontend: React JS (Hooks, Components, useEffect, REST API, State Management, Routing etc.).

Backend: Node.js, Express.js, RESTful API Development, JWT, Authentication / Authorization.

Database: mongoDb , Mongoose, MySQL

Languages: HTML5, CSS3, JavaScript (ES6).

Styling: Tailwind CSS

Layout: Flexbox, CSS Grid, Responsive Web Design

Tools: Git, GitHub, VS Code, NPM, Figma.

TRAINING EXPERIENCE

Full Stack Developer Trainee – GUVI Geek Networks

Completed structured Full Stack Development training involving real-time project development using React, JavaScript, Node.js, Express.js, MongoDB, Mongoose, JWT, Tailwind CSS, and REST API Integration.

Key Responsibilities:

- Developed and maintained full-stack web applications using MongoDB, Express.js, React.js, and Node.js (MERN Stack) along with HTML5, CSS3, and JavaScript (ES6).
- Built reusable and scalable React.js UI components following component-based architecture to improve maintainability.
- Developed RESTful APIs using Node.js and Express.js for handling server-side logic and application data.

- Designed and managed MongoDB databases using Mongoose schemas and models for efficient data storage and retrieval.
 - Implemented modern layouts using Flexbox and CSS Grid to ensure mobile-first responsive design.
 - Styled applications using Tailwind CSS for consistent and efficient UI development.
 - Integrated frontend React applications with backend APIs for dynamic data rendering and seamless user interaction.
 - Collaborated with designers and developers to build scalable, high-performance full-stack applications.
 - Debugged, tested, and optimized frontend and backend code to improve application performance and user experience
-

PROJECTS

1. Brickly – Real Estate Web Application (MERN Stack)

Team Size: 01 (Individual Project)

Project Description:

- Developed a full-stack Real Estate web application that allows users to browse properties, save listings to wishlist, contact agents through messaging, and explore detailed property information.
- Implemented role-based access control (RBAC) with User, Agent, and Admin dashboards for managing properties, platform activity, and user interactions.
- Integrated secure JWT authentication, property CRUD operations, search & filtering features, and responsive UI to provide a seamless experience across devices.
- Deployed the application using Netlify (Frontend) and Render (Backend).

Tech Stack: MongoDB, Express.js, React.js, Node.js, Mongoose, JWT Authentication, REST APIs, Tailwind CSS, React Router DOM, HTML5, CSS3, Responsive Web Design

Roles & Responsibilities: Developed responsive React.js interfaces for property listings, dashboards, wishlist, and messaging features. Integrated REST APIs for authentication, property management, and user interactions. Implemented JWT authentication and role-based access control for User, Agent, and Admin workflows. Built CRUD functionality for property listings including add, edit, delete, and view operations. Designed MongoDB schemas using Mongoose for users, properties, wishlist, and messages. Developed search and filtering functionality based on location, property type, and price. Implemented protected routes, error handling, and frontend-backend integration. Deployed and maintained the application using Netlify and Render.

Live Demo:

Frontend: [<https://real-estate-website00.netlify.app/>]

Backend: [<https://real-estate-website-be.onrender.com/>]

GitHub:

Frontend: [<https://github.com/akhilacodesss/real-estate-website-fe>]

Backend: [<https://github.com/akhilacodesss/real-estate-website-be>]

2. Real-Time Customer Support Ticketing System

Team Size: 15

Project Description:

- Developed a web-based customer support ticketing system used by support agents and managers to handle customer issues raised through multiple channels such as web forms and email.
- The system allows users to create tickets, assign priority, track ticket status, and manage resolution timelines.
- Support managers can monitor agent workload and ticket aging through dashboards.
- The application communicates with backend services via REST APIs to fetch and update ticket data in near real-time and is optimized for high-volume daily usage.

Tech Stack: HTML5, CSS3, React JS, TailwindCSS, REST APIs, Responsive Web Design

Roles & Responsibilities: Developed reusable React components for ticket creation, listing, and detailed views Integrated REST APIs to create, update, and track ticket status in real time Implemented priority indicators, status badges, and conditional rendering Designed responsive layouts using Tailwind CSS for agent and manager views Managed loading states, error handling, and empty data scenarios worked closely with backend and QA teams to validate ticket workflows

3. Content Management System (CMS) - Admin Panel

Team Size: 07

Project Description:

- Developed an admin panel for managing website content such as pages, banners, and media assets.
- Content editors can create, update, and publish content through the CMS interface.
- The system communicates with backend services via REST APIs to ensure real-time content updates across the website.

Tech Stack: HTML5, CSS3, React JS, TailwindCSS, REST APIs, Responsive Web Design

Roles & Responsibilities: Developed content listing, editor, and publishing workflows Integrated REST APIs for content CRUD operations Implemented role-based access for editors and admins Built responsive admin layouts using Tailwind CSS Ensured UI consistency and usability for non-technical users

4. Learning Management System(LMS) – Corporate Training Platform

Team Size: 07

Project Description:

- Developed a corporate learning management system used by employees to access training courses, track learning progress, and complete assessments.
- Managers can monitor team progress and course completion rates through dashboards.
- The system integrates with backend services using REST APIs to fetch course content, user progress, and certification data.

Tech Stack: HTML5, CSS3, React JS, TailwindCSS, REST APIs, Responsive Web Design

Roles & Responsibilities: Developed course listing, course detail, and progress tracking components Integrated REST APIs for course data and user progress Implemented responsive UI for learners and managers Built reusable components for quizzes and assessments Handled loading states, error handling, and empty content scenarios.

5. Front Desk Management Backend API

Team Size: 07

Project Description:

- Developed the complete backend for a Front Desk Management System used to manage service bookings and customer interactions.
- Implemented role-based access control (RBAC) with roles such as Admin, Manager, and Receptionist to control system permissions.
- Enabled service booking functionality where receptionists can create and manage customer service appointments.
- Implemented automated email notifications triggered after service booking confirmation.
- Built secure REST APIs to handle booking management, user roles, and service tracking.

Tech Stack: Node.js, Express.js, MongoDB, Mongoose, REST APIs, JWT Authentication, Nodemailer, Role Based Access Control (RBAC)

Roles & Responsibilities: Designed and developed RESTful APIs for user management, service bookings, and role-based operations. Implemented JWT authentication and authorization middleware for secure API access. Created MongoDB schemas using Mongoose for users, roles, bookings, and services. Integrated mail notification functionality using Nodemailer to trigger confirmation emails after service booking. Implemented role-based permissions for Admin, Manager, and Receptionist workflows. Added validation, error handling, and structured API responses for reliable backend operations.

6. E-Commerce Web Application (MERN stack)

Team Size: 07

Project Description:

- Developed a full-stack E-Commerce web application that allows users to browse products, add items to cart, and place orders online.
- Implemented secure user authentication and authorization for customers and administrators.
- Admin users can manage products, categories, and orders through dedicated backend APIs.
- Integrated frontend and backend using REST APIs to handle product listings, cart operations, and Order management.
- Designed the system to provide a responsive and user-friendly shopping experience across devices.

Tech Stack: MongoDB, Express.js, React.js, Node.js, Mongoose, REST APIs, JWT Authentication, HTML5, CSS3, Tailwind CSS

Roles & Responsibilities: Developed RESTful APIs using Node.js and Express.js for product management, cart operations, and order processing. Designed and managed MongoDB database schemas using Mongoose for users, products, carts, and orders. Built responsive user interfaces using React.js and Tailwind CSS for product browsing and checkout flows. Implemented JWT-based authentication and protected routes for secure user access. Integrated frontend React components with backend APIs to handle dynamic product data and user interactions. Implemented error handling, validation, and performance optimization for reliable application functionality.

CERTIFICATIONS

IIT-M Pravartak Certified Full Stack Development Course With AI Tools

GUVI Geek Networks (IITM Research Park) | Apr 2026

- Learned MERN Stack (MongoDB, Express.js, React, Node.js)
 - Built full-stack applications with REST APIs
 - Worked with authentication, CRUD operations, and frontend integration
 - Gained exposure to AI tools in development workflows
-

EDUCATION

B.E – Computer Science and Engineering

Ponnaiyah Ramajayam Institute of Science and Technology, Thanjavur
